Take two links of Hang a Plane and attach one bumper on each.

- The bottom links have to use the larger Bumpers.

Align them and have an screw with a washer ready to add on it.

Add the screw between both links using a screwdriver and have a washer and bolt ready to the other side

Using the Hang a Plane wrench or any other wrench for a size 6 bolt add the bolt leaving an space for movement.

Don't screw it till the end the system needs to be able to move to adjust to your airplane shape.

You just need to screw enough to have contact with the nylon insert.

Assembling Instructions

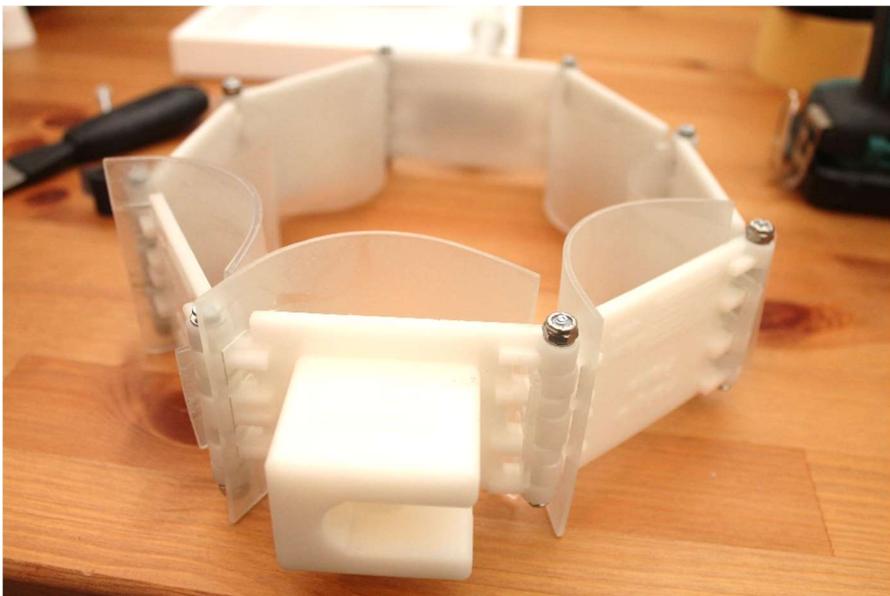

In the following ones you need to hold the bumper to connect the next links.

Repeat this process till you have your support like the one in the picture below.

The larger Bumpers have to be in the bottom 3 links to make sure your plane will not have any scratch.

Bottom 3 links with larger Bumpers
